

TAXI™

- **XML Based**
- **On the Internet**
- **Electronic Manifests**
- **Electronic Profiles**
- **Inventory Events**
- **Select™**
- **Second Click™**

TAXI, or **Terralink Automated eXchange of Information**, is the most powerful and easy to use electronic communications standard on the market today. Using the XML language as a base, TAXI provides the newest and most comprehensive platform for electronically moving profiles, manifests, inventory and other relevant information.

Why **TAXI**? Simply said, the industry needs an easy way to **filter, select and move** hazardous waste information **electronically**.

Terralink has combined all these functions to give you the easiest way possible to maximize communications flexibility. With just a few mouse clicks you now can move some or all of your data to business partners, regulatory agencies or anyone with either access to a TDX desktop or to the Internet - across the room, across town or across the country.

Search inventory events, profiles or manifests with your specific criteria. "How much Acetone did we ship in the first quarter?" "Where is our highest cost plant?" "I need an updated profile from this morning." **Select™** gives you the flexibility to easily create searches that match the criteria you need.

Then simply use **Second Click™** to send the results electronically with **TAXI**. It's that simple.

So, if your communications needs are internal or with business partners - or if you want to be ready to meet the challenges imposed by the EPA for eManifest submission, let us show you how.

You have choices. We have answers. Go Further with Terralink.

Call 207-772-6500 today to see what **TAXI** can do for you.
